

SKELTON SHERBORNE

THE CHOICE OF HEAVY INDUSTRY

ABOUT SKELTON SHERBORNE:

Skelton Sherborne is a world leader in roll-on/roll-off (RoRo) and break bulk over-dimensional shipping and integrated freight logistics. Whether you have a single machine to move or need a whole vessel chartered for a large shipment, Skelton Sherborne move your heavy equipment on time, on budget and safely.

We have close relationships with all major RoRo and break bulk carriers. Our buying power and ability to secure space is second-to-none. Furthermore, your cargo's integrity comes first and we work closely with the carrier to ensure your cargo is stowed correctly and delivered safely and without damage.

SKELTON SHERBORNE ENERGY LOGISTICS

Skelton Sherborne is Cooking With Gas!

Over the past five years, Skelton Sherborne's Energy Logistics Division has been busy ensuring that the future supply of coal seam gas will reach our energy users, by providing the international transport and logistics to many of the major energy suppliers' gas plants.

Energy Project Logistics:

Skelton Sherborne is playing a major role in shoring up Australia's future energy supplies by project managing the transportation of hundreds of thousands of tonnes of cargo into the country. This cargo is critical to the construction of the multimillion dollar projects that the likes of CS Energy, Santos, Origin and Arrow Energy are undertaking. The provision of seamless transportation of the compressors and plant ensure the power projects fire up on time and makes Skelton Sherborne the choice of heavy industry.

These energy projects involve massive operations - generally more than 200 shipments - and with the majority being excessive weights and sizes.

"Each and every project is a massive operation and each needs to be approached individually for the appropriate transport solutions," explained Skelton Sherborne's CEO, Brad Skelton. "We pride ourselves on knowing the specialised requirements of each shipment. Our team possesses the

qualifications, experience and resources to give reliable advice on the Customs clearance requirements, as well as the safest and most economical cargo configuration and any special handling that may be required."

One such project was the Kogan Creek Power Station in Queensland. The logistics contract encompassed a wide range of the services that Skelton Sherborne offers. After being inspected by our own in-house Quarantine Consultants, steel for the project was shipped from China by our freight consultants. On arrival at the Port of Brisbane it was cleared by Customs and then lifted by Skelton's own cranes onto our own trucking fleet.

"It was such a specialised job because the steel used for the beams has a constitution that is only for the use in power plants," said Brian Booth, Skelton Sherborne's Manager of Energy Logistics. "Any damage or heavy impact on the beams would have caused the steel to fracture. The beam would then have to be remanufactured, causing major delays to the project. To ensure adequate protection, cargo sensitivity was at the forefront of planning for the structural beams, which measured up to 35metres in length."

The entire project took 18 months worth of shipments to fulfil, and was completed on time and within budget by

Skelton Sherborne. Even though the project is commissioned and fully operational, the company continues to provide solutions for all imported goods for the life of Kogan Creek.

Door to Door Shipments:

Our energy logistics team is specially set up to handle project cargoes for the oil, gas and electricity generation industries. We have a team of expert staff to assist you in planning from ex-factory door to placement at site for your gas compressors, coolers and ancillary equipment - all supported by the latest IT tracking solutions.

Skelton Sherborne performs everything in the logistics chain. This relieves you of the stress and time consuming hassle of co-ordinating an array of customs agents, shipping lines, marine insurers, cranes, haulage and equipment processors involved in getting your cargo from one country to another. Our operations allow you to focus on your core responsibilities.

So no matter where your cargo originates; be it in snow covered Calgary or Houston, Texas our experienced team will organise everything you need to move your machinery from factory to site where ever that may be, seamlessly.
